

# Western Red Cedar Stands Up Against The Rest

## Red Cedar Superior In Life Cycle Study Comparing Rival Building Materials

Western Red Cedar's rich texture and natural beauty echoes the impressive style of this events venue in the foothills of Oregon's rugged Coast Range.

**Mary's River Western Red Cedar Siding** is all-natural wood with a rich texture that makes it ideal for any architectural style. Not only is it naturally beautiful, but it has been shown in a recent life cycle study by a leading forest research laboratory to be the intelligent choice for green applications.

The study found that Western Red Cedar outperformed fiber-cement, vinyl, wood-plastic composites and bricks against the criteria of raw material acquisition; energy consumption; carbon footprint; air, water and soil emissions; and waste. Even with maintenance and some replacement over the life cycle, Red Cedar was found to have the least environmental impact. Mary's River Red Cedar is precision milled and quality controlled for unmatched commitment to customer satisfaction.
