

## About Us

**Mary's River  
Lumber Company**

Mary's River Lumber Co., America's leading producer of Western Red Cedar, manufactures a diverse line of cedar products, including paneling, siding, decking, boards, and fencing. Fully integrated mills in Philomath and Corvallis, Oregon, and Montesano, Washington use sawmill systems, planer-moulders, and dry kilns designed specifically for processing Red Cedar for optimum quality.

Mary's River Western Red Cedar Channel is an ideal siding where a rough-hewn, rustic, textured appearance is desired. When coated with a solid-finish oil stain, Channel Siding makes a handsome statement in almost any architectural style, from today's craftsman to traditional or contemporary. There is a depth and detail that cannot be duplicated.

Mary's River was one of the first producers to successfully utilize the unique characteristics of tight-knotted Western Red Cedar. Our use of second-growth Red Cedar makes Mary's River product line an excellent use of forest resources and an environmentally wise choice.

Our Red Cedar Channel Siding is produced in our state-of-the-art plants in Corvallis, Oregon and Montesano, Washington to achieve the Mary's River standards of excellence. It is available either unseasoned or as a premium KD grade, dried to specific moisture content in our computerized dehumidification kilns.

Red Cedar has excellent workability and enables clean cutting and easy nailing with no splitting. It may be finished with solid, oil-based stains, clear penetrating sealers, or left to weather to a soft patina. Due to Red Cedar's durability and resistance to insects and rot, it maintains its beautiful appearance in the most severe weather conditions.

Mary's River has built its reputation on responsive sales support that delivers customers the right Red Cedar tallies when promised.

# Channel Siding
